10. 科目内容・授業計画	<p>We live together with other people in societies. When two or more people gather, society emerges. This suggests that social psychology covers a broad range of societies, from family and friends to huge social groups. Likewise this course, class of school can also be a type of societies.</p> <p>Social psychology has investigated various types of mechanisms in different size of societies, or influences caused by societies. Social psychology targets self or other's mind and behavior in both individuals and groups. Consequently, social psychology enables us to study how we affect with each other in our societies. In this class, students acquire basic knowledge and concepts of social psychology. Then, in the latter half of the lesson, you will consider the application to society by understanding the topics related to human behavior in real organizations as a concrete context in reality. To achieve this purpose, This course consists of short lectures, group work and presentations based on assignments (reading and research), Q&A sessions and a term-end report. In the group works, first, students should reconstruct and summarize articles and audio-visual materials, and exchange their opinions with each other. Next, students should set agenda in the group work, and present their opinions on it and ask the agenda to students in other groups. Students should response to questions from other groups as thoroughly as possible. After Q&A sessions, the lecturer will give commentaries on presentations, and explain general or supplemental perspectives.</p>
